

e-ITEC course on Training Program on Exploitation of Renewable Energy Technologies for Industrial Application - 20.02.2023-11.03.2023

Ms. Khamsiah Hussein, Instructor/Group Leader, IOGI Module Leader, Assistant Programme Leader, Mechanical Engineering Programme, School of Energy & Engineering Satellite, IBTE Sultan Bolkuah Campus, Seria.

Alhamdulillah, the said course is indeed beneficial to me as this course closely related to my area of teaching in IBTE, especially on Introduction to Oil and Gas module.

The feedback acquired as follows:

Facilitators:

1. The facilitators were responsive, gave clear explanation and prepared.

Course content:

1. A few of the topics were repetitive especially on cost management, paperwork etc
2. Topic on calculation of cost/profit/budget effectiveness/planning quite heavy for me as it does not involve in my area of teaching, but it is all right for extra knowledge

My comment:

1. Wider topics on maintenance and installation of renewable energy that is implemented in India
2. Perhaps, we can have virtual visit to the renewable energy plant such as hybrid and solar plant in India so that we have the idea the insight view of the area instead of other countries' plant.

Lastly, thank you Puan for given me the opportunities to join the course and interact with worldwide participants.
