

**e-ITEC course on Training Program on Exploitation of Renewable Energy Technologies for Industrial Application - 20.02.2023-11.03.2023**

**Mr. Abdul Hatimi Bin Haji Hamzah, Education Officer, PL HELE & NELT  
School of Energy and Engineering Central, IBTE Nakhoda Ragam Campus**

I want to take this opportunity to thank you for conducting the training program on Exploitation of Renewable Energy Technologies for Industrial Application that I recently participated.

Here is my feedback.

The program was well-organized and provided a comprehensive overview of renewable energy technologies and their industrial applications. It helped me to better understand the benefits and limitations of each technology.

The trainers were knowledgeable and experienced, and were able to answer questions and provide examples to illustrate key concepts. The case studies and examples that were provided helped to illustrate how renewable energy technologies can be implemented in real-world scenarios, and provided useful insights on best practices and potential challenges.

The program could have included more hands-on exercises or simulations to help participants to further reinforce the concepts learned in the program. It may be better to conduct it real-life training program rather than an online training program.

Overall, I found the program to be informative and useful, and I appreciate the effort that were put in developing and delivering the training materials.
